

# Assured NATO Interoperability.

Remotely operated aircraft systems produced by General Atomics Aeronautical Systems are routinely operated over world trouble spots. Italian Air Force and Royal Air Force customers operating Predator series aircraft along side U.S. forces have realized the benefits of seamless integration in the battlespace.

The cost-effective MQ-1 Predator, MQ-9 Reaper, and Sky Warrior variants empower NATO allies with the precision capability to detect, identify, and track time-sensitive targets instantly while supporting the Global War on Terrorism.

Continued NATO interoperability now and far into the future.
