

WHENEVER YOU NEED TO BE SOMEWHERE WITHOUT BEING THERE...

Our compact unmanned helicopters are independent and autonomous, equipped with GPS, including refined on-board electronics. And they can be set up to take anything from a stabilized camera to infrared or ultraviolet sensors up to gas-laser scanners, antennas or radar. You can use the NEO S-300 or the brand-new KOAX X-240 system for observations, inspections, monitoring, detection or reconnaissance. It's up to you, because it's SWISS UAV.

MTOW: 45-200 kg
Payload: 10-50 kg
Endurance: 1-5 h
